

The following text is from Northrop Frye's 1957 book *Anatomy of Criticism*.

Even in lyrics and essays the writer is to some extent a fictional hero with a fictional audience, for if the element of fictional projection disappeared completely, the writing would become direct address, or straight discursive writing, and cease to be literature.

©1957 by Princeton University Press

1

Mark for Review

As used in the text, what does the word “projection” most nearly mean?

(A) Elimination

(B) Estimation

(C) Presentation

(D) Prediction

Answer: C

The following text is adapted from Jhumpa Lahiri's 2003 novel *The Namesake*. Gogol has recently begun working at an architecture firm in New York.

His contributions are incidental, and never fully his own: a stairwell, a skylight, a corridor, an air-conditioning duct. Still, he knows that each component of a building, however small, is nevertheless essential, and he finds it gratifying that after all his years of schooling, all his crits [reviews] and unbuilt projects, his efforts are to have some practical end.

©2003 by Jhumpa Lahiri

Mark for Review

As used in the text, what does the word “end” most nearly mean?

- ☒ (A) Purpose
- ☐ (B) Decision
- ☐ (C) Boundary
- ☐ (D) Postponement

Answer: A

The following text is adapted from Virginia Woolf's 1919 novel *Night and Day*. Katharine is the granddaughter of a celebrated poet.

[Katharine's] descent from [a celebrated poet] was no surprise to her, but matter for satisfaction, until, as the years wore on, certain drawbacks made themselves very manifest. Perhaps it is a little depressing to inherit not lands but an example of intellectual virtue; perhaps the conclusiveness of a great ancestor is a little discouraging to those who run the risk of comparison with him.

3

 Mark for Review

As used in the text, what does the word “manifest” most nearly mean?

☐ (A) Particular

☐ (B) Intricate

☒ (C) Evident

☐ (D) Possible

Answer: C

A construction foreperson reading blueprints and directing workers in accordance with them is engaging in an act of _____. Blueprints are replete with symbols, notations, and figures that are often incomprehensible to the uninitiated; the foreperson must convert all of that arcana into practical building instructions that are easily understood by anyone on the job site.

4

 Mark for Review

Which choice completes the text with the most logical and precise word or phrase?

☐ (A) verification

☐ (B) documentation

☒ (C) translation

☐ (D) observation

Answer: C

Along with traditional Japanese forms of ironwork and weaving, sashiko embroidery was revived during the *mingei* (folk art) movement of the twentieth century. Sashiko's functional origins as a mending technique and its use of motifs inspired by everyday life, such as *yabane* (arrow feather), reflect the principle that folk art should _____ its form and themes from the lives of its creators.

5

 Mark for Review

Which choice completes the text with the most logical and precise word or phrase?

☐ (A) promote

☐ (B) distinguish

☐ (C) withdraw

☒ (D) derive

The 2024 movie *Mean Girls*, a remake of the 2004 cult classic, earned over \$28 million during its first weekend in US theaters. One reason for its popularity is that the movie's marketing team used the internet to introduce new viewers to the original story before the remake was released. The marketers uploaded the original film divided into 23 short segments to a social media site popular with teenagers. The entire film received at least 750,000 views in one day, and 100,000 people started following the "Mean Girls" social media account.

6

 Mark for Review

Which choice best states the main purpose of the text?

- ☐ (A) To praise the actors who starred in the original version of *Mean Girls*
- ☒ (B) To explain the success of advertising for the *Mean Girls* remake
- ☐ (C) To compare movie theaters in the United States to movie theaters in other countries
- ☐ (D) To criticize the cost of making movies in the United States

Answer: B

Imani Jacqueline Brown is an artist who blends scientific research, political activism, and various media in her work. In her exhibition *Strike Gulf*, she interrogated the impact of the oil and gas industry on southern Louisiana (where she grew up), incorporating core samples from deep seabeds off the Louisiana coast, oil well data, archival information about oil boycotts, and video she took in New Orleans. *Strike Gulf* thus stands as an example of Brown's multidisciplinary approach and use of diverse sources.

7

 Mark for Review

Which choice best describes the function of the underlined portion in the text as a whole?

- ☐ (A) It notes some challenges Brown faced in creating the specific exhibition that is discussed in the text.
- ☐ (B) It describes a project of Brown's that deviates from the typical approach that is described earlier in the text.
- ☐ (C) It signals a shift from a focus on Brown's artistic work in the first sentence to a focus on her work as an activist in the last sentence.
- ☒ (D) It offers details about one of Brown's works that support the claims made in the first and last sentences.

The following text is from Mary Crow Dog's 1990 autobiography *Lakota Woman*, written in collaboration with Richard Erdoes.

At the center of the old Sioux society was the tiyospaye, the extended family group, the basic hunting band, which included grandparents, uncles, aunts, in-laws, and cousins. The tiyospaye was like a warm womb cradling all within it. Kids were never alone, always fussed over by not one but several mothers, watched and taught by several fathers.

©1990 by Mary Crow Dog and Richard Erdoes

8

 Mark for Review

What does the text most strongly suggest about the function of the tiyospaye?

- ☐ (A) It served as the central authority for governing society.
- ☐ (B) It functioned primarily as a way to organize hunting activities.
- ☐ (C) It operated as a formal network for maintaining cultural practices.
- ☒ (D) It offered care and protection to all the members it included.

The following text is adapted from William Shakespeare's 1598 play *Henry IV, Part 1*. King Henry is addressing several noblemen who are rumored to have been disloyal to him.

KING HENRY: My blood hath been too cold and temperate,
Unapt to stir at these indignities,
And you have found me, for accordingly
You tread upon my patience; but be sure
I will from henceforth rather be myself,
Mighty and to be fear'd, than my [disposition],
Which hath been smooth as oil, soft as young down,
And therefore lost that title of respect
Which the proud soul ne'er pays but to the proud.

9

 Mark for Review

Which statement best describes how King Henry presents himself in the text?

- ☐ (A) He defends his calm disposition, which he sees as fundamental to his personality, and vows to maintain his tranquil demeanor even if it causes him to lose the respect of overly proud noblemen.
- ☐ (B) He declares that he has judged the noblemen's conduct in an impartial manner, and that despite their attempts to regain his trust through professions of submissiveness, they have irrevocably lost his respect.
- ☒ (C) He acknowledges to the noblemen that his tolerance of their conduct has undermined their respect for him, and he resolves to display his genuine nature, which is more forceful and compels deference.
- ☐ (D) He concedes that he has treated the noblemen with indifference, which in part explains why they have defied him, but he asserts that their disrespectful behavior is primarily driven by their excessive pride.

Flatland is an 1884 novel by Edwin A. Abbott. The narrator describes the novel's setting as a world consisting entirely of two-dimensional geometric figures, whose existence is confined to the surface of a plane: _____

10

Mark for Review

Which quotation from *Flatland* most effectively illustrates the claim?

- (A) “Every human being in Flatland is a Regular Figure, that is to say of regular construction. By this I mean that a Woman must not only be a line, but a straight line; that an Artisan or Soldier must have two of his sides equal.”
- (B) “The sizes of the [figures’] sides would of course depend upon the age of the individual.... A tall adult Woman might extend to a foot. As to the Males of every class, it may be roughly said that the length of an adult’s size, when added together, is two feet or a little more. But the size of our sides is not under consideration.”
- (C) “As early as the eleventh century of our era, triangular houses were universally forbidden by Law, the only exceptions being fortifications, [gun]powder magazines, barracks, and other state buildings, which is not desirable that the general public should approach.”
- (D) “Imagine a vast sheet of paper on which straight Lines, Triangles, Squares, Pentagons, Hexagons, and other figures, instead of remaining fixed in their places, move freely about, on or in the surface, but without the power of rising above or sinking below it...and you will then have a pretty correct notion of my country.”

Some food packaging contains silver nanoparticles (Ag-NPs), which can leach into waterways and soils via wastewater. In a 2015 study, Tina Ramskov and colleagues found that Ag-NPs can accumulate in the bodies of marine annelid worms (*Capitella teleta*). While bioaccumulation of manufactured nanoparticles may be inherently worrisome, it has been hypothesized that Ag-NP bioaccumulation in invertebrates like *C. teleta* could serve a valuable proxy role, obviating the need for manufacturers to conduct costly and intrusive sampling of vertebrate species—such as Atlantic salmon (*Salmo salar*), commonly used in regulatory compliance testing—for nanoparticle bioaccumulation, as environmental protection laws currently require.

11

Mark for Review

Which finding, if true, would most directly weaken the hypothesis presented in the text?

- (A) Compared with *S. salar*, *C. teleta* can accumulate detectable Ag-NP concentrations with significantly fewer negative effects.
- (B) *C. teleta* has been shown to accumulate several other types of manufactured nanoparticles in addition to Ag-NPs, whereas *S. salar* has been shown to accumulate only Ag-NPs.
- (C) Ag-NP concentrations in *C. teleta* show no reliable correlation with Ag-NP concentrations in *S. salar* when the two species are exposed to similar levels of Ag-NPs.
- (D) Given comparable levels of exposure to Ag-NPs, *C. teleta* accumulates Ag-NPs at a higher rate than *S. salar* does but in a fixed ratio to the rate at which *S. salar* does.

In the retina of the human eye, long (L), medium (M), and short (S) cone cells help process bright light and color by sending signals to the brain. M cones react to a range in the visible spectrum of light that completely overlaps with those L and S cones react to. As a result, _____

12

 Mark for Review

Which choice most logically completes the text?

- (A) the brain more easily interprets colors in the range both L and M cones react to than in the range both M and S cones react to.
- (B) it is possible to study the roles of L, M, and S cones because each type of cone can be activated without activating the other types.
- (C) it is difficult to exclusively study the role of M cones in human vision under natural conditions because M cones can't be activated without simultaneously activating the L and S cones.
- (D) L cones react only to wavelengths associated with the color red, S cones react only to wavelengths associated with the color blue, and M cones react only to wavelengths associated with the color green.

At Underwater Trail (US Virgin Islands), coral colonies experiencing degradation—a problem facing reefs globally—have been enhanced with transplanted fragments of staghorn (a stony coral). This is a useful restoration approach but is challenging at scale since it involves cultivating and individually moving young stony coral pieces. In 2025, Samapti Kundu and her team announced a new approach: coating reef substrates with a simple-to-apply substance, made with inexpensive and abundant core components (e.g., silica), that can mimic a signal that draws coral larvae to settle in healthy reefs. When tested in conditions simulating real ocean environments, the substance enhanced settlement by up to twentyfold. These attributes suggest that the substance _____

13

 Mark for Review

Which choice most logically completes the text?

- (A) should be able to simulate healthy reef signals even more closely when it is applied in natural ocean conditions.
- (B) is likely to require more costly components to ensure its stability when used for coral colonies as degraded as those at Underwater Trail.
- (C) offers a means of reef restoration that likely allows much broader implementation than the approach used at Underwater Trail does.
- (D) should be most beneficial for restoring reefs that predominantly consist of staghorn coral colonies.

Carl Woese's 1970s study of methanogens (microbes with no nuclei, such as *Methanosarcina barkeri*, that metabolize hydrogen and carbon dioxide in oxygen-poor environments and produce methane as a by-product) suggested that they did not fit scientists' then-conventional division of life into two domains, the eukaryotes (having cells with nuclei) and the prokaryotes (missing nuclei). Molecular clock evidence indicated that what Woese argued was a third domain of life emerged as early as 3.5 billion years ago. Methanogens would have been well-adapted to conditions then given that _____

14

 Mark for Review

Which choice most logically completes the text?

- (A) atmospheric hydrogen levels were much lower around 3.5 billion years ago than they were both earlier and later in Earth's history.
- (B) Earth's oxygen levels were very low until the Great Oxidation Event approximately 2.4 billion years ago.
- (C) the earliest undisputed evidence of eukaryotes is much more recent than 3.5 billion years ago.
- (D) methane, while primarily biological in origin on Earth, can be produced in the absence of biological activity.

Answer: B

Portuguese researcher Isabel C.F.R. Ferreira found that almond mushrooms contain gentisic acid, an antioxidant that combats free radicals, which are molecules that can damage healthy cells in organisms. Ferreira hopes to harness mushroom antioxidants _____ an array of conditions in animals and plants alike.

- ☐ (B) To note an exception,
- ☐ (C) In addition to these novels,
- ☐ (D) Given these differences,

In a 2022 analysis of small sovereign countries, Archie Simpson categorized forty-one as microstates based, in part, on the criterion of having a population under one million—for instance, Barbados, with its population of approximately 282,000. _____ political scholar Sarina Theys suggests an intersubjective approach to classification by which a small country's status is self-defined rather than relying on externally imposed or quantitative standards.

23

 Mark for Review

Which choice completes the text with the most logical transition?

- (A) Challenging the accuracy of Barbados's population data,
- (B) Reinforcing the importance of Simpson's population criterion,
- (C) Countering this method of categorization,
- (D) In addition to this example,

Answer: C

While researching a topic, a student has taken the following notes:

- Fireflies produce flashing lights.
- These lights help them attract mates.
- These lights help some fireflies warn off predators.

24 Mark for Review

The student wants to explain how some fireflies use their flashing lights for protection. Which choice best uses information from the notes to do this?

- ☐ (A) Fireflies produce flashing lights to attract mates.
- ☐ (B) Each firefly species has its own unique flashing pattern.
- ☒ (C) Some fireflies produce flashing lights to warn off predators.
- ☐ (D) Some fireflies produce flashing lights to lure prey.

Answer: C

While researching a topic, a student has taken the following notes:

- Pineapple juice has a pH value of approximately 3.5.
- Avocados have a pH value of approximately 6.4.
- Substances with pH values below 7 are acidic.

25

 Mark for Review

The student wants to say what pineapple juice and avocados have in common. Which choice best uses information from the notes to do this?

- ☒ (A) Pineapple juice and avocados are both acidic substances.
- ☐ (B) Pineapple juice has a pH value that makes it acidic.
- ☐ (C) Some acidic substances have pH values of approximately 6.4.
- ☐ (D) Pineapple juice and avocados have pH values of approximately 3.5.

Answer: A

While researching a topic, a student has taken the following notes:

- In a 2021 study, researchers showed participants sets of images.
- Each set contained an unaltered image of a different character or logo alongside two slightly altered versions.
- Participants were asked to identify the correct version in each set.
- In the set containing C-3PO, 18.5% of participants selected the correct version, and 81.5% selected an altered version.
- In the set containing the Mercedes-Benz logo, 94% of participants selected the correct version, and 6% selected an altered version.

26

 Mark for Review

The student wants to explain how participants performed on the set with the Mercedes-Benz logo. Which choice most effectively uses relevant information from the notes to accomplish this goal?

- (A) In a 2021 study, researchers showed participants sets of images containing unaltered versions of popular characters or logos, such as the Mercedes-Benz logo, alongside two altered versions.
- (B) While 94% of participants selected the correct version of the Mercedes-Benz logo, just 18.5% selected the correct version of C-3PO.
- (C) C-3PO and the Mercedes-Benz logo were both included in a 2021 study.
- (D) When shown an image set of the Mercedes-Benz logo, 94% of participants identified the correct version, and 6% selected an altered version.

A student has taken the following notes:

- A team of researchers led by Guanning Pang discovered that inactive volcanoes in the Cascade Range have large underground magma chambers 3 to 9 miles below their surface.
- Some of these volcanoes have been dormant for thousands of years.
- Researchers detected magma by tracking earthquake waves that slowed down when passing through chambers of magma consisting of 3% to 32% melted rock.
- Magma chambers need over 35% liquid rock to potentially erupt.
- These findings challenge the scientific theory that magma chambers only exist right before eruptions.
- The discovery could improve volcano monitoring and eruption prediction methods.

27

 Mark for Review

A student wants to undermine a scientific assumption about magma chambers. Which choice most effectively uses relevant information from the notes to accomplish this goal?

- (A) By tracking earthquake waves, Pang found that magma reservoirs sit 3 to 9 miles below the Cascade Range volcanoes' surface and need over 35% liquid magma to potentially erupt.
- (B) Researchers detected magma chambers by tracking earthquake waves through partially melted rock, improving volcano monitoring and eruption prediction methods for dormant volcanoes.
- (C) Magma chambers need over 35% liquid rock to potentially erupt, refuting the assumption that volcanoes dormant for thousands of years have melted rock below.
- (D) Scientists found inactive Cascade Range volcanoes with large magma chambers below their surface, challenging the theory that magma chambers only exist right before eruptions.

While some people believe they can reduce monthly air-conditioning costs simply by closing air registers in vacant rooms, this practice can actually reduce the _____ climate-control systems by creating internal pressure imbalances that restrict airflow across critical components and force motors to work harder.

28

 Mark for Review

Which choice completes the text with the most logical and precise word or phrase?

☒ (A) efficiency of

☐ (B) limitation on

☐ (C) need for

☐ (D) expense of

An ancient statue from the Huasteca region of Mexico represents a subject not seen before in artifacts from the area: a woman in an assertive stance wearing items used in a ceremonial ballgame. Archaeologist María Eugenia Maldonado notes that this image of a powerful athlete _____ the idea that women in pre-Columbian societies held only passive roles.

29

 Mark for Review

Which choice completes the text with the most logical and precise word or phrase?

☒ (A) challenges

☐ (C) forgets

☐ (D) predicts

Any effort to raise the toll that drivers must pay to use the Fort Madison Toll Bridge, which spans the Mississippi River to connect Iowa and Illinois, should explain why a higher toll is necessary; no amount of justification, however, is likely to persuade some drivers who believe the current toll is _____.

30

 Mark for Review

Which choice completes the text with the most logical and precise word or phrase?

(A) contentious

(B) exorbitant

(C) warranted

(D) equivocal

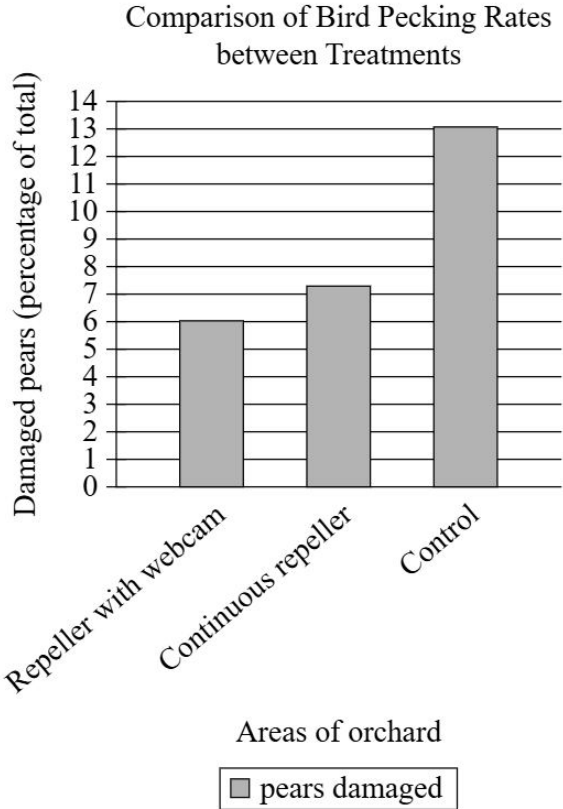

Edmund Morris, noted for his three-volume chronicle of the life of Theodore Roosevelt, completed *Edison*, his biography of Thomas Edison, in 2019. The book covers important parts of its subject's life, including Edison's childhood in Michigan, his creation of a carbon-filament electric light bulb, and his development of a rechargeable battery. However, it relates Edison's life in reverse chronological order, an unusual approach about which reviewer Derek Thompson said, "Nothing is gained by [it], and much comprehension is lost."

31

 Mark for Review

Which choice best describes the overall structure of the text?

- (A)** It describes a surprising feature of a biography, offers a justification for that feature, then suggests that a critic was unfair to the biography in his assessment.
- (B)** It identifies a biography, notes some events recounted in the biography, then presents a critical response to one particular quality of the biography.
- (C)** It refers to two biographies, contrasts certain aspects of those biographies, then explains why critics generally preferred one biography to the other.
- (D)** It presents the subject of a biography, describes some major developments in that subject's life, then suggests that the biography's account of that life made some careless omissions.

Starlings and other pest birds can cause damage to sweet cherries and other fruits grown on farms by pecking at them and spoiling them. Aware of some practical limitations of liquid repellents and other common deterrents, Qing Chen et al. investigated the utility of an inexpensive, easily installed sonic bird repeller in a pear orchard. In one area the repeller emitted a sound continuously, while in another it emitted a sound only when triggered by a webcam linked to a neural network trained to recognize a pest bird's presence. (A third area without a repeller was used as a control condition.) Chen et al. concluded that an intermittently active sonic repellent is more effective than one that is constantly active as evidenced by the fact that

32 Mark for Review

Which choice most effectively uses data from the graph to complete the assertion?

- A the lowest rate of damage occurred in the area of the orchard where the repeller was not attached to a neural network.
- B the rate of damage to the pears was approximately 7% in the area with the repeller attached to a neural network and approximately 13% in the area where no repeller was used.
- C the rate of damage to the pears was approximately 6% in the area with the repeller attached to a neural network and approximately 7% in the area with the repeller not attached to a neural network.
- D the greatest rate of damage to the pears occurred in the area of the orchard where no repeller was used.

A 2025 study performed by Simon Townsend and colleagues presents evidence that bonobos, close relatives of chimpanzees, are capable of a rudimentary compositionality in communication—that is, they can organize sounds they make such that the order carries meaning in addition to the sounds themselves. After reviewing bonobo calls recorded in forests of the Democratic Republic of the Congo, Townsend’s team claimed that bonobos sometimes paired calls in specific orders and that the contexts of such pairs indicate they were deliberate communications rather than products of chance. The team based their claim on mathematical analysis of hundreds of hours of bonobo calls along with notes of the contexts in which they occurred.

33

 Mark for Review

Which finding, if true, would best support the researchers’ claim?

- (A) Bonobos used a single yelp or a single peep as an imperative, but a yelp appeared to be closer to a command, while a peep tended to function as a suggestion.
- (B) When bonobos paired grunts with other calls, they did not use rules of syntax as humans do to combine groups of sounds into even larger units of meaning.
- (C) A bonobo grunt seems to function as a request for other bonobos to join in whatever activity is ongoing, since bonobos emitting a grunt did so during potentially collaborative contexts such as feeding, nesting, and grooming.
- (D) While a single whistle from a bonobo was often an attempt to organize groups, a whistle preceded by a peep sound usually occurred in the presence of a charged social situation.

Wayang is an art form from Java, Indonesia, that uses shadow puppets, voice actors, and music to tell stories. As long ago as the ninth century, wayang artists began to learn from and teach puppet artists from other places, including India and Persia (present-day Iran). Today, wayang performances regularly add heroes and stories from ancient Indian and Persian tales. This suggests that wayang, as it is performed today, _____

34

 Mark for Review

Which choice most logically completes the text?

- ☐ (A) is more popular among the Javanese people than are other forms of storytelling.
- ☐ (B) is largely unchanged from how it was performed in the ninth century.
- ☒ (C) includes elements from other cultures along with Javanese ones.
- ☐ (D) focuses on the specifically Indonesian aspects of the art form.

Answer: C

As the publisher of the *Virginia Gazette*, Clementina Rind helped spread ideas that would become important in the American Revolution. In August 1774, she published Thomas Jefferson's *A Summary View of the Rights of British America*, a pamphlet _____ many of the principles that later appeared in the Declaration of Independence.

(C) regardless;

(D) for instance;

Stargazers who looked up at the right time (and with the right protective equipment) on July 10, 1907, were able to enjoy the beautiful totality of an annular solar eclipse. ____ Spectators had just seven minutes, twenty-three seconds to watch the dramatic moment when the moon almost entirely blocks the sun.

40

 Mark for Review

Which choice completes the text with the most logical transition?

- ☐ (A) Eventually, the event concluded as expected.
- ☒ (B) The phenomenon was brief, though.
- ☐ (C) However, this wasn't all they saw.
- ☐ (D) In fact, such phenomena are fairly common.

While researching a topic, a student has taken the following notes:

- Manatees eat a diet of only plants.
- Manatees eat about 100 pounds of food daily.

41

 Mark for Review

The student wants to describe manatees' daily diet. Which choice best uses information from the notes to do this?

- ☒ (A) Manatees eat about 100 pounds of plants daily.
- ☐ (B) The daily diet of manatees is about 100 different types of plants.
- ☐ (C) Manatees weigh about 100 pounds.
- ☐ (D) Manatees eat more than 100 times per day.

Answer: A

While researching a topic, a student has taken the following notes:

- Ezshwan Winding is a Hungarian American artist who specializes in encaustic painting, which follows a multistep process.
- Step 1: select and prepare the painting surface (often wood).
- Step 2: mix melted wax and resin together and add pigment for color to create the encaustic medium.
- Step 3: spread the medium on the surface in layers, applying heat to allow each layer to soften and fuse with the previous layers.
- Step 4: use various tools to carve patterns into the painting.

42

 Mark for Review

The student wants to describe the process of making and applying the encaustic medium. Which choice most effectively uses relevant information from the notes to accomplish this goal?

- (A)** Using various tools, the artist mixes the wax and resin, which fuse together in layers.
- (B)** The artist spreads wax, resin, and pigment onto the encaustic medium (often wood), then applies heat so that they soften and fuse to the previous layers.
- (C)** After adding pigment for color, the artist applies a mix of wax and resin to a painting surface, at which point patterns are carved into it.
- (D)** The artist creates the medium from wax, resin, and pigment and then spreads it onto a painting surface in layers, heating the layers so that they soften and fuse together.

While researching a topic, a student has taken the following notes:

- For centuries in Japan, terraced rice fields (*tanada* in Japanese) were built by shaping steep hillsides into flat steps.
- This traditional farming method allowed farmers to increase arable land.
- The Ōhara-shinden *tanada* in Shimane Prefecture, Japan, was developed during the Heian period.
- The Heian period (794 CE–1185 CE) was characterized by economic stability and peace.
- The Nichikō *tanada* in Kumamoto Prefecture, Japan, was developed during the Edo period.
- The Edo period (1603 CE–1867 CE) was characterized by economic stability and peace.

43

 Mark for Review

The student wants to emphasize a historical similarity between the two rice terraces. Which choice most effectively uses relevant information from the notes to accomplish this goal?

- (A) Developed during the Heian and Edo periods, respectively, the Ōhara-shinden and Nichikō *tanada* were shaped out of steep hillsides.
- (B) The Ōhara-shinden *tanada* was developed during the Heian period; meanwhile, the Nichikō *tanada* was developed during the Edo period.
- (C) The Ōhara-shinden and Nichikō *tanada* are both exemplars of a traditional farming method wherein flat steps are shaped out of steep hillsides.
- (D) As was true for the Ōhara-shinden *tanada*, the Nichikō *tanada* was developed during a period of economic stability and peace.

Research has shown that regardless of musical training, most hearing adults recognize that the notes of the simple melody of “Baa Baa Black Sheep” are harmonious. Similarly, a study showed that even participants with no musical training could easily follow the underlying beat in the Brazilian samba song “Águas de Marco” despite its often complex rhythms, raising the possibility that this capability was somehow _____ the participants.

44

 Mark for Review

Which choice completes the text with the most logical and precise word or phrase?

(A) undertaken by

(B) instinctive for

(C) imposed on

(D) unique to

The following text is from Edith Wharton's 1917 novel *Summer*. Eagle County is located in a region where summer weather can be quite cool.

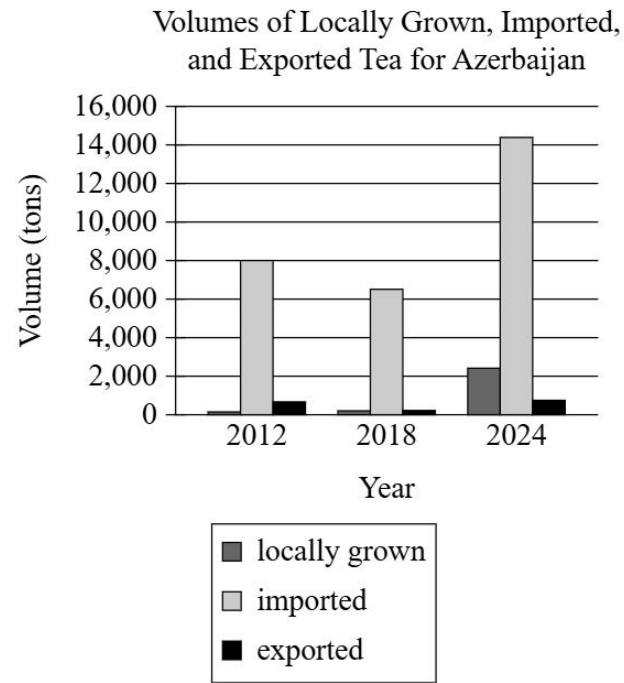

There had never been such a June in Eagle County. Usually it was a month of moods, with abrupt alternations of belated frost and mid-summer heat; this year, day followed day in a sequence of temperate beauty. Every morning a breeze blew steadily from the hills. Toward noon it built up great canopies of white cloud that threw a cool shadow over fields and woods; then before sunset the clouds dissolved again, and the western light rained its unobstructed brightness on the valley.

45

 Mark for Review

Which choice best states the main purpose of the text?

- ☐ (A) To depict a problem
- ☐ (B) To illustrate a conflict
- ☐ (C) To describe a character
- ☒ (D) To portray a setting

Whereas international consumers regard Azerbaijani tea as a premium product, Azerbaijanis often complain about the poor quality of the tea available there. To better understand the situation, a tea company employee collected data on Azerbaijan’s volumes of locally grown, imported, and exported tea in 2012, 2018, and 2024.

46

Mark for Review

Which choice describes data from the graph that could most reasonably explain the situation described in the text?

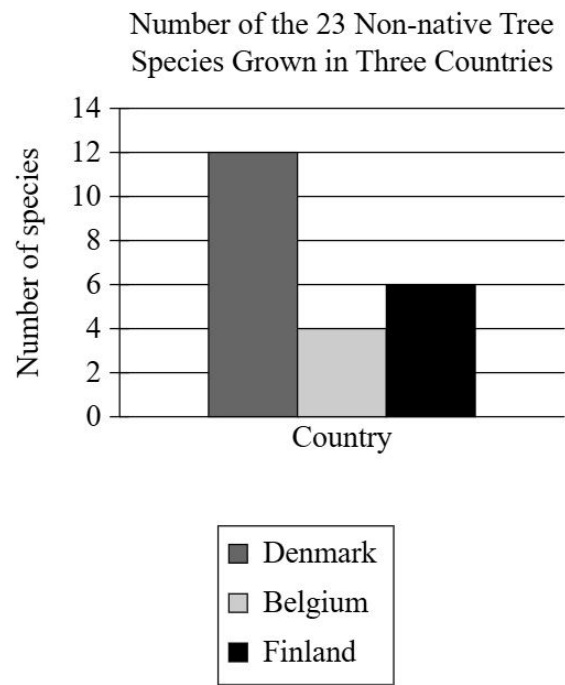

- A

In 2012, 2018, and 2024, Azerbaijan imported substantially more tea than it grew locally or exported, suggesting that locally consumed tea is primarily imported tea rather than Azerbaijani tea.
- B

The volume of locally grown tea and the volume of imported tea were both substantially greater in 2024 than in 2012, suggesting a rapid rise in the popularity of tea among Azerbaijanis.
- C

In 2012, the volume of exported tea exceeded the volume of locally grown tea, indicating that Azerbaijani tea sold outside of Azerbaijan must contain tea sourced from other countries.
- D

In 2012 and 2018, all or most tea grown in Azerbaijan was exported, suggesting that Azerbaijani consumers had to consume imported tea instead.

Elisabeth Pötzelsberger and colleagues gathered data on 23 non-native tree species grown in Europe. They analyzed reports from Denmark, Finland, and Belgium about the number of these species grown by the timber industries in those countries. The researchers concluded that none of these countries' timber industries grow all 23 species.

47

Mark for Review

Which choice best describes data from the graph that support Pötzelsberger and colleagues' conclusion?

- A

Some of the species that Finland reported are not among the 23 tree species that Pötzelsberger and colleagues were evaluating.
- B

There are species other than those reported by Belgium that are important to its timber industry, but they're native to the country.
- C

Denmark, Finland, and Belgium each reported at least 4 of the 23 species.
- D

Denmark, which reported more of the 23 species than either Finland or Belgium did, reported fewer than 15 of the species.

Plants often reduce photosynthesis in undamaged parts of their leaves when other parts are being eaten by insects. It appears that feeding triggers the closure of stomata—tiny openings that allow carbon dioxide to enter the leaf—thereby limiting plants' ability to fix carbon (capture and convert it to carbohydrates during photosynthesis). In a study of genetically identical plants, those that were modified to emit an insect-deterring chemical compound experienced a smaller decline in photosynthesis under insect attack than those that did not emit the compound. Since the two types of plants showed no other differences, this finding suggests that

48

 Mark for Review

Which choice most logically completes the text?

- (A) emitting the defensive compound enabled plants to keep their stomata open to a greater extent than they otherwise would have.
- (B) plants that emitted the defensive compound converted a greater proportion of captured carbon to carbohydrates than they otherwise would have.
- (C) there may have been underlying genetic differences between the plants that strengthened the correlation between compound emission and photosynthesis efficiency.
- (D) emitting the defensive compound allowed plants to compensate for stomata closure by fixing carbon more efficiently.

In 2022 Octavio Tuwits Wajai, who studies mammals, joined a research team for a 38-day expedition to the remote yet populous region of Alto Mayo, Peru. It had long been assumed that regions with large human _____ were unlikely to yield discoveries of new species, but team members found 27 such species, including a new species of dwarf squirrel.

49

When the Salon des Refusés art exhibition opened in 1863, visitors openly scoffed at paintings whose experimental styles and original subject matter departed so startlingly from tradition that they had been rejected from the official Paris Salon exhibit. _____ these canvases were soon recognized as harbingers of an artistic revolution, with their unconventional elements no longer derided but lauded as the foundation of the late nineteenth-century Impressionist movement.

53

 Mark for Review

Which choice completes the text with the most logical transition?

- ☐ (A) In keeping with their more traditional counterparts,
- ☐ (B) Before their Salon des Refusés debut,
- ☒ (C) Despite their initial dismissive reception,
- ☐ (D) In response to their Paris Salon rejection,

Answer: C

In the past, the White House has played host to a diverse menagerie of pets, including the turkey owned by Abraham Lincoln, the nation's sixteenth president. _____ for the last few decades, nearly every White House pet has been a cat or dog.

54

 Mark for Review

Which choice completes the text with the most logical transition?

- (A) In fact, all but a few US presidents have kept pets during their tenure in office;
- (B) Ultimately, Lincoln's uncommon pet choice had little bearing on his political legacy;
- (C) That said, recent US presidents have stuck to more conventional choices;
- (D) Indeed, it's been suggested that pet ownership can bolster a president's public image;

Answer: C

A student has taken these notes:

- Checkered white butterflies are white with brown spots.
- They are most active during the day.
- They eat nectar from flowers.

55

 Mark for Review

The student wants to say when checkered white butterflies are most active. Which choice best uses information from the notes to do this?

- ☐ A The checkered white butterfly is a kind of insect.
- ☐ B Some butterflies are white with brown spots.
- ☒ C Checkered white butterflies are most active during the day.
- ☐ D Checkered white butterflies eat nectar from flowers.

Answer: C

The following text is adapted from John Matheus's 1925 short story "Fog."

The fog extended its tentacles over city and river, gradually obliterating traces of familiar landscapes. At five-thirty the old Panhandle bridge, supported by massive sandstone pillars, stalwart, as when erected fifty years before to serve a generation now passed behind the portals of life, had become a spectral outline against the sky.

56

 Mark for Review

As used in the text, what does the word "traces" most nearly mean?

☒ (A) Indications

☐ (B) Recollections

☐ (C) Copies

☐ (D) Debris

A team led by Portuguese researcher Isabel C.F.R. Ferreira found that many species of mushrooms contain chemicals called phenolic compounds, such as cinnamic acid and catechin. _____ Ferreira detected cinnamic acid in *Agaricus blazei* mushrooms and catechin in *Lentinus edodes* mushrooms.

57

 Mark for Review

Which choice completes the text with the most logical and precise word or phrase?

☒ (A) promote

☐ (B) compel

☐ (C) divide

☐ (D) cluster

The geographic distribution of animal characters in traditional stories typically _____ current distributions of corresponding species, likely because such stories often serve to transmit information cautioning about local wildlife. Folktales from the British Isles featuring bears are an apparent exception, persisting as culturally significant long after wild bears had gone extinct there.

60

 Mark for Review

Which choice completes the text with the most logical and precise word or phrase?

(A) acquiesces to

(B) aligns with

(C) digresses from

(D) compensates for

Patent data suggest that technology start-ups (newly established businesses) are more likely to develop innovative products than established technology companies are. The established tech companies have fewer _____ to create groundbreaking products because the sale of new products could compete with the sale of their existing products.

61

 Mark for Review

Which choice completes the text with the most logical and precise word or phrase?

☐ (A) compromises

☐ (B) options

☒ (C) incentives

☐ (D) obstacles

Answer: C

Earth's atmosphere performs several important functions. It traps heat from the Sun, so Earth stays warm enough to support life. It blocks harmful radiation and burns up most space rocks before they hit the ground. It also contains the oxygen, carbon dioxide, and nitrogen that plants and animals need to live. Without our atmosphere, Earth would be a lifeless place like the Moon.

62

 Mark for Review

Which choice best describes the overall structure of the text?

- ☐ (A) It identifies threats to Earth's atmosphere and suggests ways to protect it.
- ☐ (B) It narrates step by step how Earth's atmosphere has changed over time.
- ☒ (C) It lists several key functions of Earth's atmosphere and their benefits.
- ☐ (D) It compares Earth's atmosphere to the atmospheres found on other planets.

Answer: C

The following text is from Yung Wing's 1909 memoir *My Life in China and America*. Yung Wing was the first person from China to graduate from a US university.

Little did I realize when in 1845 I wrote, while in the Morrison School, a composition on "An Imaginary Voyage to New York and up the Hudson," that I was to see New York in reality. This incident leads me to the reflection that sometimes our imagination foreshadows what lies uppermost in our minds and brings possibilities within the sphere of realities.

63

 Mark for Review

Which choice best describes the function of the underlined sentence in the text as a whole?

- ☒ (A) It describes an event in Yung's life that exemplifies a phenomenon.
- ☐ (B) It illustrates the sense of adventure that Yung developed as a child.
- ☐ (C) It reinforces Yung's skill as a creative writer.
- ☐ (D) It indicates Yung's unwillingness to distinguish between reality and fantasy as a child.

From the green turtle to the pygmy blue whale, a wide range of semiaquatic species have been found to share a common approach for saving energy when traveling long distances. To minimize both wave drag at the surface and the vertical distance to reach the surface to breathe, these air-breathing marine animals swim at depths around three times their body diameter. This finding has important implications for animal conservation efforts. For example, considering typical swim depths could help inform the use of vertically zoned protections in protected marine habitats.

64

 Mark for Review

Which choice best states the main purpose of the text?

- (A) To identify a shared trait across several species that makes the conservation of those species particularly challenging
- (B) To present a finding about the behavior of certain species that may help conservationists protect those species
- (C) To describe a general trend in the swim depths of certain species that explains why those species are more efficient swimmers than are other semiaquatic species
- (D) To summarize a theory that accounts for why most air-breathing marine animals swim at the same depth regardless of their size

Answer: B

Text 1

Stonefox's 2013 song "All I Want" includes a specific musical pattern. That pattern consists of two alternating notes sung over and over with "wa" and "oh" sounds, resulting in a sequence of "Wa-oh-wa-oh." This pattern showed up in so many pop songs in the 2000s and 2010s that eventually it earned a nickname, "the millennial whoop." The whoop showed up so frequently that some musicians and critics felt it had grown irritating.

Text 2

The millennial whoop could be annoying. Not every pop song needs "Wa-oh-wa-ohs!" and it seemed as though nearly every pop song released between 2000 and 2017 had them. But the whoop could also be genuinely fun or even moving. Too many songwriters used it in too many pop songs for a time, but that doesn't mean the whoop was never used well.

65 Mark for Review

Based on the texts, what would the author of Text 2 most likely say in response to the underlined portion of Text 1?

- ☐ A "There are better examples of the millennial whoop than the one found in 'All I Want.'"
- ☐ B "The millennial whoop is worth talking about, but other musical patterns are more interesting."
- ☒ C "It's true that the millennial whoop could be annoying, but it could also be wonderful."
- ☐ D "The millennial whoop wasn't used as often as some people think."

The League of American Bicyclists reported in 2016 that in most large cities in the United States, a small percentage of commuters were regularly using a bike to get to their jobs. For example, only 0.8% of commuters in San Jose, California, and 0.6% of commuters in Phoenix, Arizona, were biking to work. But the populations of those cities are very large, so the number of commuters using bikes was still in the hundreds or thousands.

66

 Mark for Review

Which choice best states the main topic of the text?

- ☐ (A) How bicycles are made
- ☐ (B) The weather in San Jose, California
- ☒ (C) Biking to work in large US cities
- ☐ (D) Types of jobs available in the US

Answer: C

Stratus clouds form low in the atmosphere. These clouds often cover a large part of the sky in a smooth gray layer. Their name comes from the Latin word *stratus*, which means “spread out.” Stratus clouds form when a large mass of air cools and the water vapor in the cloud condenses into tiny water droplets. This is why these clouds often bring light rain. On overcast days when the sun can’t be seen, stratus clouds are likely overhead.

67

 Mark for Review

What is the main topic of the text?

- ☒ (A) Characteristics of stratus clouds
- ☐ (B) How weather forecasters predict rainfall
- ☐ (C) The Latin origins of weather terms
- ☐ (D) Different types of clouds in the atmosphere

Answer: A

Alvin Pang's prose poem "Other Things" challenges the notion that prose poetry—a hybrid form that blends prose formatting with figures of speech and other traditional poetic devices—ought to be contained within a single page. Jane Monson is among the many poets and scholars who claim that prose poems shouldn't exceed one page, while others argue for greater expansiveness, embracing multipage works. This divide is reflected in anthologies: a large majority of prose poems in such collections are under half a page, though *The Penguin Book of the Prose Poem* (2018) includes a high proportion of longer works.

68

 Mark for Review

Which choice best states the main idea of the text?

- (A) The ideal length for prose poems remains a contested subject among scholars and practitioners of the form.
- (B) As seen in a work by Pang and in the greatly differing approaches taken in anthologies, prose poems vary widely in length.
- (C) The editorial choices of a 2018 anthology are a reflection of the widening acceptance of longer prose poetry.
- (D) Some scholars and poets have criticized Pang's poem "Other Things" for exceeding the generally accepted length for prose poems.

Percentage of Trials in which Dogs Exhibited Behavior in Three Tests

Dog name	Test 1	Test 2	Test 3	Breed
Athena	0	8	0	border collie
Benhur	0	0	16	kelpie
Scotch	0	8	0	Australian shepherd
Gaia	92	83	67	border collie

Studying a group that contained both typical dogs and dogs known to be gifted at learning words, Andrea Sommesse, Ákos Pogány, and team targeted a behavior—head tilting—as a possible sign of processing meaningful information. The researchers exposed the dogs to two novel toys by name and then recorded the dogs’ head tilts when they were later asked to fetch the toys, with sets of trials given to each dog in tests at three intervals after exposure (1 month, 2 months, and 3 months).

69

Mark for Review

According to the table, which dog tilted its head in 92% of trials when tested at 1 month after exposure to the toys?

- A

 Gaia
- B

 Benhur
- C

 Athena
- D

 Scotch

US Hydroelectric Power Plants, 2019

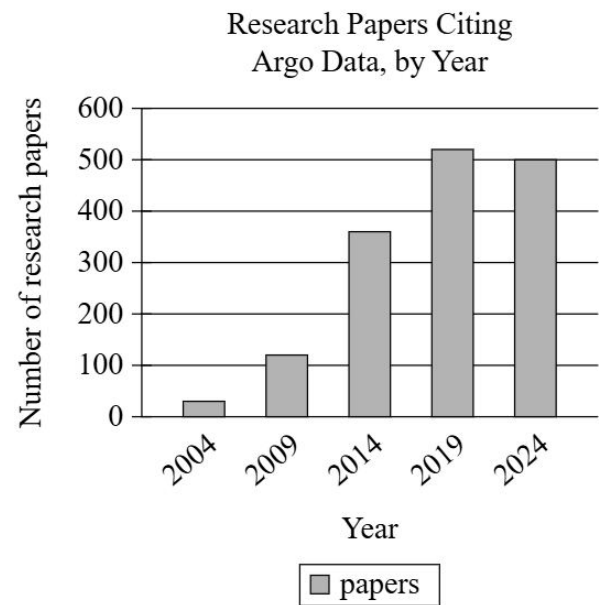

Plant	State	Mode	Generators in plant	Average power generation (MWh/yr)	Water source
Spirit Mountain	Wyoming	run-of-river	1	15,940	Shoshone River
Kankakee Hydro Facility	Illinois	run-of-river	3	1,832	Kankakee River
Hiwassee Dam	North Carolina	peaking	2	198,220	Hiwassee River
Wallowa Falls	Oregon	run-of-river	1	5,642	East Fork Wallowa River

In 2021, Rocío Uría-Martínez, Megan M. Johnson, and Rul Shan published a report on hydroelectric power plants operating in the US as recently as 2019, and data from their report are shown in the table. Of the plants in the table, the plant with the highest average power generated per year in 2019 was located in the state of _____

70  Mark for Review

Which choice most effectively uses data from the table to complete the assertion?

- ☐ A Oregon.
- ☒ B North Carolina.
- ☐ C Illinois.
- ☐ D Wyoming.

Argo is a worldwide program that monitors Earth’s oceans using thousands of underwater robots called floats. The floats measure certain water properties, such as temperature and pH level, while moving up and down in the water. The data recorded by these floats are made available online. Scientists make a lot of use of these data; for example, in 2024, _____

71

Mark for Review

Which choice most effectively uses data from the graph to complete the example?

- A

the floats recorded data from about 500 different locations worldwide.
- B

more than 500 floats were released into the oceans to record data about the weather.
- C

more than 600 research papers were published that cited Argo data.
- D

about 500 research papers were published that cited Argo data.

“The Lesson” is a 1913 poem by Paul Laurence Dunbar. In the poem, the speaker comes to realize that comforting another person helps to lessen the speaker’s own sadness: _____

72

 Mark for Review

Which quotation from “The Lesson” most effectively illustrates the claim?

- (A) “Of my mind so weary and sick and wild, / Of my heart too sad to sing.”
- (B) “In trying to soothe another’s woes / Mine own had passed away.”
- (C) “And I thought of myself so sad and lone, / And my life’s cold winter that knew no spring.”
- (D) “And heard well up from the deep dark wood / A mocking-bird’s passionate song.”

Answer: B

Rafael Núñez and colleagues studied how members of the Yupno, an Indigenous group in Papua New Guinea, conceptualize time in both spoken language and gestures. The researchers recorded Yupno speakers explaining certain temporal words and phrases, such as *kalip bishap*, a past-oriented expression that translates to “past times,” and coded each speaker’s manual gestures. Previous research has found a tendency in many cultures to make temporal distinctions along imagined linear axes: for instance, Spanish speakers often refer to the left/right axis to describe events in time. Some researchers believe this tendency is universal, but Núñez and colleagues claim this is not the case.

73

 Mark for Review

Which finding, if true, would most directly support Núñez and colleagues’ claim?

- (A) Some Yupno grammatical structures used when talking about time are also used in Spanish.
- (B) Future-oriented gestures used by Yupno speakers do not, on average, point in the opposite linear direction of past-oriented gestures.
- (C) Yupno speakers typically use their left hand to make temporal gestures regardless of whether the gestures are past oriented or future oriented.
- (D) Yupno speakers were observed making temporal gestures both indoors and outdoors, though with greater frequency when indoors.

The 363-mile-long Erie Canal was completed in 1825. This waterway, the longest in the US at the time, made it much easier to transport passengers and goods between New York and the Great Lakes. For this reason, _____

Mark for Review

Which choice best describes the function of the underlined sentence in the text as a whole?

- ☒ A It describes the warm patch.
- ☐ B It establishes that Nariman feels optimistic.
- ☐ C It states what time it is.
- ☐ D It explains why Nariman enjoys studying his surroundings.

Although superhero teams of the 1960s, like the Fantastic Four, included women, female characters often possessed powers that seemed less threatening than those of their male counterparts. While the Thing had super strength and invulnerability, the Invisible Girl's ability was to turn invisible. These superheroines were marginalized in action-oriented plots, serving instead as objects of romance or rescue. Yet depictions of immensely powerful heroines haven't necessarily been more empowering: consider the Scarlet Witch, who lost control of her reality-altering abilities and robbed countless fellow mutants of their unique abilities.

87

 Mark for Review

Which choice best states the main purpose of the text?

- ☐ (A) To show how avoidance of a particular type of characterization has resulted in a set of contradictory assumptions about female superheroes
- ☒ (B) To illustrate tendencies in how female superheroes have been depicted
- ☐ (C) To describe two ways in which comic book narratives centered on women have demonstrated that great power must be handled with great care
- ☐ (D) To explain how representations of female superheroes changed during a certain period

Percentage of Trials in which Dogs Exhibited Behavior in Three Tests				
Dog name	Test 1	Test 2	Test 3	Breed
Rico	42	92	16	border collie
Popi	0	0	8	border collie
Kesu	0	8	0	border terrier
Enzo	0	0	8	whippet

Studying a group that contained both typical dogs and dogs known to be gifted at learning words, Andrea Sommeze, Ádám Miklósi, and team targeted a behavior—head tilting—as a possible sign of processing meaningful information. The researchers exposed the dogs to two novel toys by name and then recorded the dogs’ head tilts when they were later asked to fetch the toys, with sets of trials given to each dog in tests at three intervals after exposure (1 month, 2 months, and 3 months).

88

Mark for Review

According to the table, which dog tilted its head in 42% of trials when tested at 1 month after exposure to the toys?

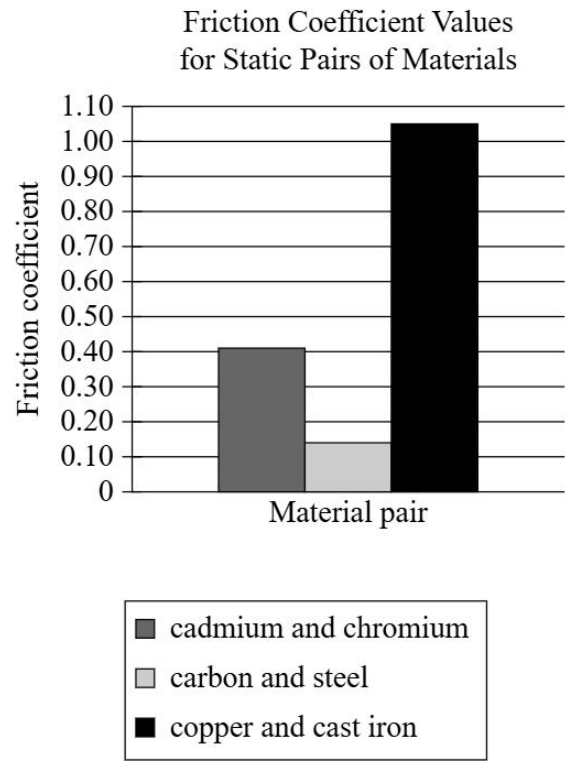

- A

 Kesu
- B

 Rico
- C

 Popi
- D

 Enzo

Friction, the force that resists the movement of two materials in contact with each other, exists even when the materials are static (not moving). Friction coefficients are values that represent the degree of resistance between materials, with smaller values indicating less resistance. A student notes that of the pairs of materials in the graph, the greatest resistance occurs between ____

89

Mark for Review

Which choice most effectively uses data from the graph to complete the statement?

- ☒ A copper and cast iron.
- ☐ B carbon and steel.
- ☐ C cadmium and chromium.
- ☐ D carbon and chromium.

The National Civil Rights Museum is located in Memphis, Tennessee. There, you will _____ exhibits about the history of the civil rights movement.

 Mark for Review

Which choice completes the text with the most logical transition?

☒ (A) Finally,

☐ (B) First of all,

☐ (C) Instead,

☐ (D) For instance,

Some famous novels originally had titles very different from those they're known by today. ____ while William Golding was writing his classic novel about a group of boys stranded on an island, he called it *Strangers from Within*—a title he had abandoned in favor of *Lord of the Flies* by the time of the book's publication in 1954.

95

 Mark for Review

Which choice completes the text with the most logical transition?

- ☐ (A) To note an exception,
- ☒ (B) To cite one example,
- ☐ (C) Given these differences,
- ☐ (D) In addition to these novels,

- The Highpointers Club is a hiking club.
- One of the main goals among club members is to reach the highest points in all fifty US states.
- Those who achieve this are called 50 Completers.
- In Suk Han became a 50 Completer on November 15, 2013.
- The highest point in Wisconsin is Timms Hill, at 1,951 ft.
- The highest point in Wyoming is Gannett Peak, at 13,809 ft.

96

 Mark for Review

Which choice most effectively uses information from the given sentences to explain the 50 Completers hiking challenge to a new audience?

- (A) If you are looking for a new hiking challenge, consider joining the Highpointers Club, as did In Suk Han, a hiker who successfully reached the highest point in every US state.
- (B) Not until after you have reached the highest points in all fifty US states—including Timms Hill in Wisconsin and Gannett Peak in Wyoming—can you include yourself among the 50 Completers of the Highpointers Club.
- (C) On November 15, 2013, In Suk Han finally completed the feat of reaching the highest point in all fifty US states, including Timms Hill in Wisconsin and Gannett Peak in Wyoming.
- (D) Hikers aiming to count themselves among the 50 Completers must reach not only Wisconsin's Timms Hill but also the even higher peak of Gannett Peak in Wyoming.

- Antonio Stradivari (1644–1737) was an Italian instrument maker.
- He made about 1,000 violins in his lifetime.
- Musicians prize his Stradivarius violins for their famed sound quality.
- The Ole Bull Stradivarius is named for former owner Ole Bull, a Norwegian violinist.

97

 Mark for Review

Which choice most effectively uses information from the given sentences to introduce Ole Bull to a new audience?

- ☐ (A) The Ole Bull Stradivarius is named after Ole Bull.
- ☐ (B) Of the 1,000 or so violins Antonio Stradivari made, only about 500 exist today.
- ☒ (C) Ole Bull was a Norwegian violinist who once owned a Stradivarius violin.
- ☐ (D) Born in 1644, Antonio Stradivari was an Italian instrument maker whose violins are famous for their quality.

Answer: C

In areas with mineral-rich water, mineral deposits may build up inside water heaters. If not treated or removed, these deposits can grow large enough to _____ heat transfer, thereby undermining the main function of the devices.

98

 Mark for Review

Which choice completes the text with the most logical and precise word or phrase?

☒ (A) impede

☐ (B) convert

☐ (C) require

☐ (D) isolate

Answer: A

Vertical gene transfer involves the transmission of genetic material from a parent to offspring; horizontal gene transfer, on the other hand, involves the exchange of genetic material between organisms not in a parent-offspring relationship. While horizontal gene transfer is common among prokaryotes—single-celled organisms, such as the bacteria *Enterococcus cecorum* and *Moraxella caviae*—it has rarely been observed among eukaryotes (multicellular organisms). However, new studies suggest that horizontal gene transfer is more common in eukaryotes than originally thought.

99

Mark for Review

Which choice best states the function of the underlined sentence in the text as a whole?

- (A) It contrasts the frequency with which a biological phenomenon has been detected in two categories of organisms.
- (B) It indicates a distinction between the mechanics of two kinds of biological processes.
- (C) It argues that two biological phenomena are more similar than they may initially appear to be.
- (D) It explains why a common perception of a biological process is flawed.

Positive expressive writing is a writing technique intended to create positive mindsets through a focus on exploring and expressing thoughts and emotions such as happiness. Lauren Hoult and colleagues systematically reviewed multiple studies about different styles of positive expressive writing that included methods known as gratitude letter, satisfaction processes, and best possible self. They concluded that gratitude letter and best possible self showed the most consistent benefits for increasing happiness and fostering a positive mindset.

100

 Mark for Review

According to the text, which methods of positive expressive writing did Hoult and colleagues conclude were most consistently effective?

- ☐ (A) Best possible self and fostering a positive mindset
- ☒ (B) Gratitude letter and best possible self
- ☐ (C) Best possible self and satisfaction processes
- ☐ (D) Gratitude letter and satisfaction processes

Answer: B

Biologist Grace Herzel and colleagues conducted a study of how butterfly color and weather conditions relate to butterfly behavior, which wouldn't have been possible without data gathered by students and other amateur science enthusiasts in the community. Considering over three years' worth of data, the researchers found that white butterflies were observed on green flowers more often than any other butterflies were, and that butterflies were observed to feed more often on cloudy days than on other days.

101

 Mark for Review

According to the text, which factors seemed to be linked to the behavior of butterflies in Grace Herzel and colleagues' study?

- ☐ (A) Neither butterfly color nor weather conditions
- ☒ (B) Both butterfly color and weather conditions
- ☐ (C) Weather conditions but not butterfly color
- ☐ (D) Butterfly color but not weather conditions

Answer: B

Members of the Girl Scouts of America, by Age Category, 1992–1995 (in thousands)

Category	1992	1993	1994	1995
Brownies (6–8 years)	1,319	1,225	1,181	1,142
Daisies (5–6 years)	207	191	190	195
Seniors (14–17 years)	50	43	45	52
Cadettes (11–14 years)	188	168	174	172

The Girl Scouts of America is an organization famous for its annual sales of several varieties of cookies, including S'Mores. A student is writing an essay on the history of the organization and wishes to determine which of four age groups of Girl Scouts had the most members in 1993. According to the table, the age group with the most members in 1993 was that of scouts _____

102

Mark for Review

Which choice most effectively uses data from the table to complete the statement?

Which choice completes the text with the most logical transition?

- ☒ (A) First,
- ☐ (B) However,
- ☐ (C) Indeed,
- ☐ (D) Next,

Answer: A

While researching a topic, a student has taken the following notes:

- Manatees eat a diet of only plants.
- Manatees eat about 100 pounds of food daily.

105 Mark for Review

The student wants to describe manatees' daily diet. Which choice best uses information from the notes to do this?

- ☐ (A) Manatees eat more than 100 times per day.
- ☐ (B) Manatees weigh about 100 pounds.
- ☒ (C) Manatees eat about 100 pounds of plants daily.
- ☐ (D) The daily diet of manatees is about 100 different types of plants.

Answer: C

The Underdogs is a 1915 novel by Mariano Azuela, originally written in Spanish. In the novel, Azuela makes a comparison using natural imagery to convey the mental state of the protagonist, Demetrio: _____

106

 Mark for Review

Which quotation from a translation of *The Underdogs* most effectively illustrates the claim?

- (A) “At this hour, as usual, the calcinated rocks, the sun-burnt branches, and the dry weeds faded into the semi-obscurity of the shadows.”
- (B) “Demetrio suppressed a sigh. Memories crowded and buzzed through his brain like bees about a hive.”
- (C) “Demetrio laid a hand on his hair which covered his ears, and stretching himself out for a long time, seemed to be lost in thought.”
- (D) “Yet he was previous; an hour or more elapsed with no sound or stir save the song of the locust in the brush or the frog stirring in his mudhole.”

US Hydroelectric Power Plants, 2019

Plant	State	Mode	Generators in plant	Average power generation (MWh/yr)	Water source
Smith Mountain	Virginia	peaking	5	339,845	Roanoke River
Gaston Shoals	South Carolina	peaking	4	14,059	Broad River
Oneida	Idaho	run-of-river	3	38,783	Bear River
Spearfish	South Dakota	run-of-river	2	2,204	Spearfish Creek

In 2021, Rocío Uría-Martínez, Megan M. Johnson, and Rul Shan published a report on hydroelectric power plants operating in the US as recently as 2019, and data from their report are shown in the table. Of the plants in the table, the plant with the highest average power generated per year in 2019 was located in the state of _____

107 Mark for Review

Which choice most effectively uses data from the table to complete the assertion?

- ☐ A South Carolina.
- ☐ B Idaho.
- ☒ C Virginia.
- ☐ D South Dakota.

Whereas Rebecca M. Harrison and Pia Nystrom's 2001 study of captive bonobos reported more right-handedness than left-handedness, Jane Goodall's 1963 study of wild chimpanzees did not. According to a meta-analysis of studies of nonhuman primates, captive populations are more likely to be described as right-handed than wild populations are. Statistical analysis indicates a handedness study would need a minimum of 176 individuals to show a representative result; however, the study by Harrison and Nystrom included a total population of 19, and the study by Goodall included a total population of 8. This suggests that _____

108

 Mark for Review

Which choice most logically completes the text?

- ☐ (A) neither the study by Harrison and Nystrom nor the study by Goodall provides sufficient evidence to make a meaningful comparison about handedness in primates.
- ☐ (B) the study by Harrison and Nystrom reliably represents handedness in captive primates but not in wild primates.
- ☐ (C) Goodall likely underestimated the prevalence of right-handedness among the wild chimpanzees in the study.
- ☐ (D) the study by Harrison and Nystrom reliably represents handedness in captive primates, but the study by Goodall likely does not reliably represent handedness in wild primates.

An ancient statue from the Huasteca region of Mexico represents a subject not seen before in artifacts from the area: a woman in an assertive stance wearing items used in a ceremonial ballgame. Archaeologist María Eugenia Maldonado notes that this image of a powerful athlete _____ the idea that women in pre-Columbian societies held only passive roles.

109

 Mark for Review

Which choice completes the text with the most logical and precise word or phrase?

(A) reveals

(B) challenges

(C) forgets

(D) predicts

In an analysis of over 50,000 records of pollinators visiting flowers, botanists determined that flowers with bilateral symmetry (zygomorphs) are visited by a smaller subset of pollinators than the subset that visits flowers with radial symmetry (actinomorphs), thus _____ anecdotal observations that zygomorphic flowers exclude many potential pollinators.

110

 Mark for Review

Which choice completes the text with the most logical and precise word or phrase?

(A) allocating

(B) substantiating

(C) transposing

(D) supplanting

The preponderance of studies on aqueous uranium (U)—including a 1997 study by Moran et al.—were in oceanic contexts. In a 2020 investigation of factors influencing the abundance of the isotope U-238 in Kaluka Lake and three other lakes in northwest China, Zhao et al. therefore aimed to address the relative _____ of scientific knowledge on uranium isotopes in inland bodies of water.

111

 Mark for Review

Which choice completes the text with the most logical and precise word or phrase?

- ☒ (A) dearth
- ☐ (B) aggregation
- ☐ (C) diminution
- ☐ (D) obsolescence

Rare tree species growing in the Tyson Research Center are much likelier than common species to be found in conspecific (same-species) aggregations, but in the Barro Colorado Island plot, conspecific aggregation and abundance are nearly _____, which is to be expected given that rare species in Barro Colorado are heavily reliant on seed dispersion via animals, while those in the Tyson Center tend to drop seeds directly to the ground.

112

 Mark for Review

Which choice completes the text with the most logical and precise word or phrase?

- ☐ (A) inverted
- ☐ (B) indistinguishable
- ☒ (C) independent
- ☐ (D) intermittent

Answer: C

In many parts of the world, merchants rarely label goods with exact prices like 17.31 or 203.62. Studies have shown that consumers view exact prices as reflecting merchant expertise and careful calculation, so why aren't they more common? One reason is that exact prices may create greater cognitive friction during purchase decisions than do whole-number prices or prices easily rounded to whole numbers (e.g., 5.99, *which is little different from* 6). Particularly if multiple goods are being considered for purchase, tracking and comparing exact prices may feel onerous to consumers.

113

 Mark for Review

Which choice best states the main purpose of the text?

- (A) To argue that exact prices are relatively uncommon because calculating them is burdensome for merchants
- (B) To address the question of why the use of exact prices is less common in some parts of the world than in others
- (C) To explain why exact prices present greater cognitive friction for some consumers than whole-number prices or easily rounded prices do
- (D) To account for the fact that exact prices remain uncommon in many places despite some positive consumer perceptions of them

Visiting flowers that produce high volumes of nectar allows hummingbirds, including stripe-throated hermits, to maximize their foraging efficiency. But nectar can't be seen from outside the flower, and while some studies have suggested that petal length may indicate nectar volume, María A. Maglianesi and team found no such association among hummingbird-visited plants at Los Cusingos Bird Sanctuary and other sites in Costa Rica. The researchers hypothesize that by driving hummingbirds to visit more plants in search of high-reward flowers, plants' lack of reliable signaling may increase chances of pollination.

114

 Mark for Review

Which choice best describes the function of the underlined portion in the text as a whole?

- (A) It attributes the inconclusive findings reported in the text regarding the influence of a particular floral trait on interactions between hummingbirds and plants to differences in study sites.
- (B) It suggests that a hypothesis discussed later in the text regarding a potential visual cue that hummingbirds rely on to increase their foraging efficiency has little support from the broader scientific community.
- (C) It acknowledges research findings, which weren't replicated by the study discussed later in the text, positing a relationship between floral traits that potentially underlies hummingbird foraging decisions.
- (D) It summarizes contradictory study findings concerning a floral trait that influences hummingbird foraging patterns, which the study mentioned later in the text aimed to resolve.

The following text is from Yung Wing's 1909 memoir *My Life in China and America*. Yung Wing was the first person from China to graduate from a US university.

Little did I realize when in 1845 I wrote, while in the Morrison School, a composition on "An Imaginary Voyage to New York and up the Hudson," that I was to see New York in reality. This incident leads me to the reflection that sometimes our imagination foreshadows what lies uppermost in our minds and brings possibilities within the sphere of realities.

115

 Mark for Review

Which choice best describes the function of the underlined sentence in the text as a whole?

- ☐ (A) It illustrates the sense of adventure that Yung developed as a child.
- ☐ (B) It reinforces Yung's skill as a creative writer.
- ☐ (C) It indicates Yung's unwillingness to distinguish between reality and fantasy as a child.
- ☒ (D) It describes an event in Yung's life that exemplifies a phenomenon.

Text 1

Coal mining and other human activities are significant sources of atmospheric methane (CH₄), but, as Sander Houweling and colleagues have shown, so too are naturally occurring emissions, such as those from wild animals. This biogenic CH₄ is challenging to monitor given natural sources' variability and spatial diffusion, but one promising approach is to use CH₄ flux data from extant monitoring infrastructure as proxies for CH₄ fluxes in unmonitored areas.

Text 2

Sparkle Malone and colleagues examined the United States' network of eddy covariance (EC) towers—the equipment used to track CH₄ fluxes—to evaluate the utility of network data for quantifying biogenic CH₄. Malone et al. found that EC towers are disproportionately concentrated in areas where biogenic CH₄ emissions are known to be elevated, a pattern that seriously compromises the representativeness of network data.

116 Mark for Review

Based on the texts, Malone et al. (Text 2) would most likely agree with which statement about the “approach” described in Text 1?

- (A) It could compromise the accuracy of the biogenic CH₄ emissions data that EC towers collect in areas with elevated emissions.
- (B) It would only be viable if the EC towers monitoring biogenic CH₄ emissions could detect smaller fluxes than they can at present.
- (C) It may suggest that biogenic CH₄ emissions in unmonitored areas are higher than they actually are.
- (D) It is likely to be useful for determining biogenic CH₄ emissions in unmonitored areas of some regions but not of most regions.

The following text is adapted from Richard Connell's 1923 short story "The Man Who Could Imitate a Bee." An ornithologist is a scientist who studies birds.

At twelve [years old Hervey Deyo] had resolved to be a scientist and furthermore a great scientist. He determined to pursue the career of ornithologist; there was something so dignified and withal scientific about a science that called the sparrow *Passer domesticus* and the robin *Erithacus rubecula*. He made rapid progress. On his thirteenth birthday he took a bird walk at dawn and was able to record in his note-book the scientific names of forty-nine birds, including the ruby-and-topaz humming-bird (*Chrysolampis mosquitus*) which is rare around Boston.

117

 Mark for Review

According to the text, what motivates Hervey Deyo to become an ornithologist rather than another kind of scientist?

- ☐ A His early success in identifying rare birds
- ☐ B His general ambition to become a great scientist in any field
- ☒ C The scientific names used for birds
- ☐ D The opportunity to take peaceful morning walks in nature

Answer: C

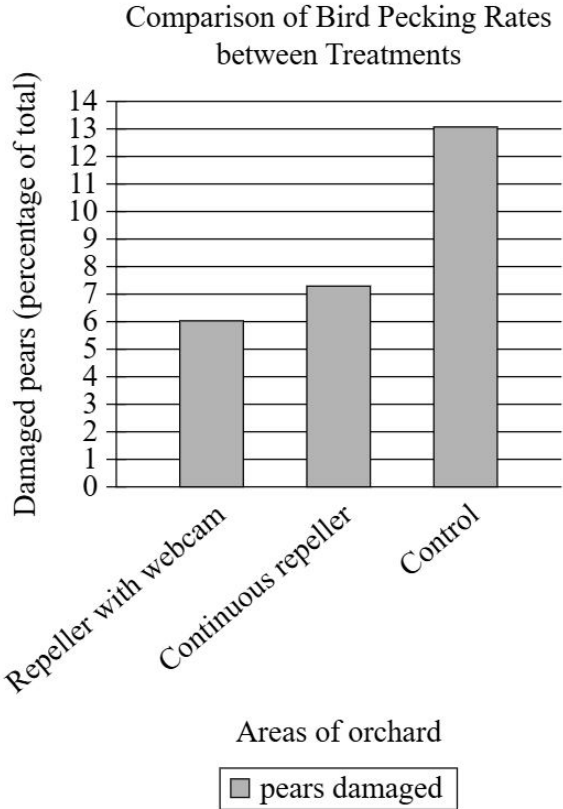

Thurgood Marshall saw litigation as a means to enact social reforms and advance equal justice for US citizens. He cited the law's "capacity to initiate change and its flexibility to accept and mold change" as vital, breaking with the historical tradition of wielding the courts primarily to clarify or modify existing laws. This vision was realized in Marshall's successful arguing of the 1954 *Brown v. Board of Education* case before the US Supreme Court, as the court's decision to overturn the long-standing "separate but equal" doctrine revolutionized how the legal system regarded civil rights.

118

 Mark for Review

Based on the text, how did Marshall's *Brown v. Board of Education* case most likely influence the US legal system's approach to civil rights?

- ☐ (A) It led courts to focus more on clarifying existing civil rights laws than on making modifications to them.
- ☒ (B) It established that the courts could be used as a tool for significant social change.
- ☐ (C) It inadvertently resulted in the courts taking a more cautious, incremental approach to advancing subsequent civil rights cases.
- ☐ (D) It promoted the idea that legal action is the most efficient way to create social change.

Finches and other pest birds can cause damage to grapes and other fruits grown on farms by pecking at them and spoiling them. Aware of some practical limitations of netting and other common deterrents, Qing Chen et al. investigated the utility of an inexpensive, easily installed sonic bird repeller in a pear orchard. In one area the repeller emitted a sound continuously, while in another it emitted a sound only when triggered by a webcam linked to a neural network trained to recognize a pest bird's presence. (A third area without a repeller was used as a control condition.) Chen et al. concluded that an intermittently active sonic repellent is more effective than one that is constantly active, as evidenced by the fact that

119

Mark for Review

Which choice most effectively uses data from the graph to complete the assertion?

- (A) the greatest rate of damage to the pears occurred in the area of the orchard where no repeller was used.
- (B) the rate of damage to the pears was approximately 6% in the area with the repeller attached to a neural network and approximately 7% in the area with the repeller not attached to a neural network.
- (C) the lowest rate of damage occurred in the area of the orchard where the repeller was not attached to a neural network.
- (D) the rate of damage to the pears was approximately 7% in the area with the repeller attached to a neural network and approximately 13% in the area where no repeller was used.

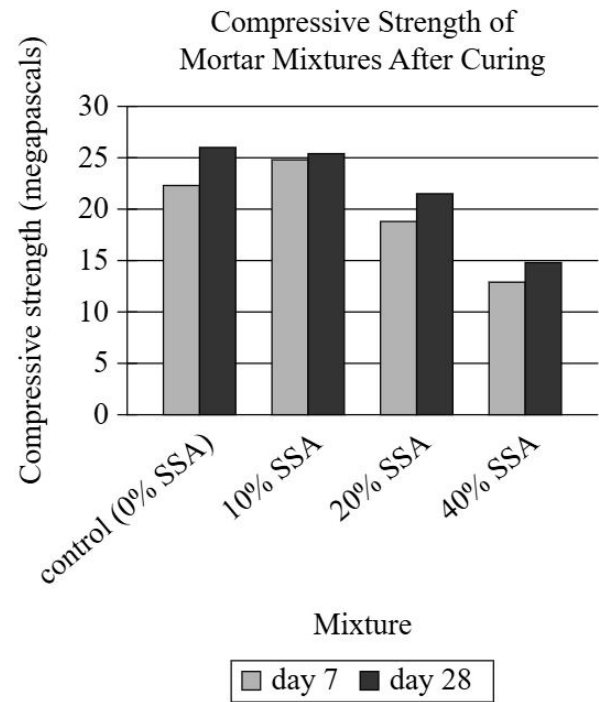

A 2025 study performed by Simon Townsend and colleagues presents evidence that bonobos, close relatives of chimpanzees, are capable of a rudimentary compositionality in communication—that is, they can organize sounds they make such that the order carries meaning in addition to the sounds themselves. After reviewing bonobo calls recorded in forests of the Democratic Republic of the Congo, Townsend’s team claimed that bonobos sometimes paired calls in specific orders and that the contexts of such pairs indicate they were deliberate communications rather than products of chance. The team based their claim on mathematical analysis of hundreds of hours of bonobo calls along with notes of the contexts in which they occurred.

120

 Mark for Review

Which finding, if true, would best support the researchers’ claim?

- (A) A bonobo grunt seems to function as a request for other bonobos to join in whatever activity is ongoing, since bonobos emitting a grunt did so during potentially collaborative contexts such as feeding, nesting, and grooming.
- (B) Bonobos used a single yelp or a single peep as an imperative, but a yelp appeared to be closer to a command, while a peep tended to function as a suggestion.
- (C) When bonobos paired grunts with other calls, they did not use rules of syntax as humans do to combine groups of sounds into even larger units of meaning.
- (D) While a single whistle from a bonobo was often an attempt to organize groups, a whistle preceded by a peep sound usually occurred in the presence of a charged social situation.

Mollusk shells are mainly composed of calcium carbonate, a chemical compound used in mortar and other construction materials. A research team led by Ariane da Silva Cardoso investigated pulverizing discarded Sururu mussel shells to create a substitute for fine aggregates (such as sand) in mortar mixtures. The team prepared mixtures with Sururu shell aggregate (SSA) replacing varying percentages of sand and then tested the mortars' compressive strength on days 7 and 28 of curing. Based on their findings, the team recommended SSA substitution in relatively small proportions to avoid compromising strength.

121

Mark for Review

Which choice most effectively uses data from the graph to support the researchers' recommendation?

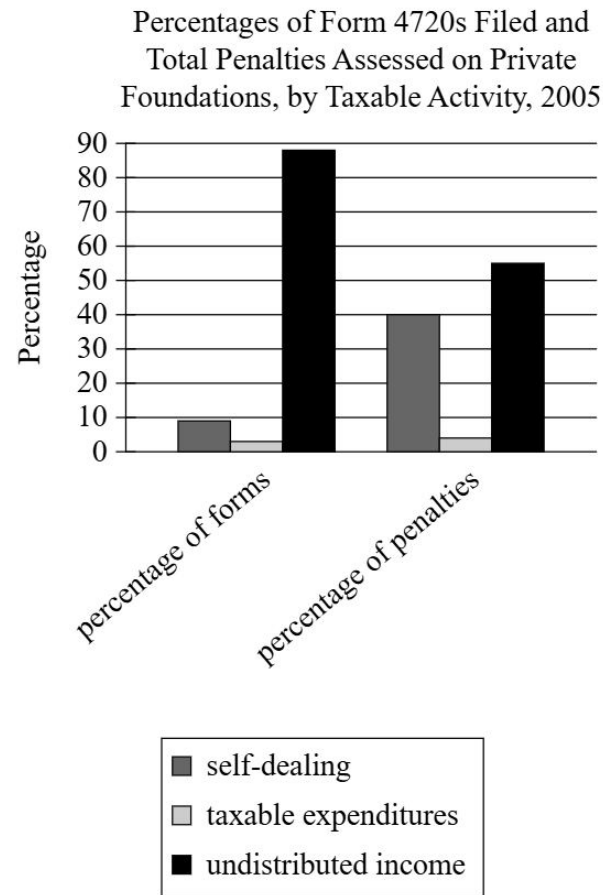

- A

The compressive strength of the 10% SSA mixture remained nearly the same from day 7 to day 28, while that of the 20% and 40% SSA mixtures changed substantially.
- B

The compressive strength of the 10% SSA mixture never surpassed the compressive strength measured for the control mixture on day 28.
- C

The 10% SSA mixture's compressive strength was greater than that of the control mixture on day 7, but by day 28 the 10% SSA mixture's compressive strength had decreased while that of the control mixture had increased.
- D

The 10% SSA mixture's compressive strength was greater than or approximately equal to that of the control mixture on day 7 and on day 28, but on both days the 20% and 40% SSA mixtures had less compressive strength than the control mixture did.

While US public charities, like Howard Hughes Medical Institute, must file Form 990 yearly with the IRS, private foundations, such as the W.K. Kellogg Foundation, must file a different form, 990-PF. In addition, foundations that engage in certain prohibited activities must also file Form 4720 and pay a penalty tax on the money involved. Prohibited activities for private foundations include “self-dealing” (conducting activities that benefit foundation insiders), making taxable expenditures such as grants to noncharitable entities, and failing to cross a

122

Mark for Review

Which choice most effectively uses data from the graph to complete the assertion?

- (A) those that filed Form 4720 because they engaged in self-dealing paid, on average, lower penalties than those that filed Form 4720 because they did not meet the minimum charitable distribution requirement.
- (B) more filed Form 4720 because they failed to meet the minimum charitable distribution requirement than did so in the following year.
- (C) those that filed Form 4720 because they did not meet the minimum charitable distribution requirement paid, on average, higher penalties than those organizations that filed Form 990 but also filed Form 4720 for the same reason.
- (D) those that filed Form 4720 because they engaged in self-dealing and those that filed Form 4720 because of their taxable expenditures collectively paid a smaller portion of the total penalty than those that filed Form 4720 because they did not meet the minimum charitable distribution requirement.

Rafael Núñez and colleagues studied how members of the Yupno, an Indigenous group in Papua New Guinea, conceptualize time in both spoken language and gestures. The researchers recorded Yupno speakers explaining certain temporal words and phrases, such as *kalip bishap*, a past-oriented expression that translates to “past times,” and coded each speaker’s manual gestures. Previous research has found a tendency in many cultures to make temporal distinctions along imagined linear axes: for instance, Spanish speakers often refer to the left/right axis to describe events in time. Some researchers believe this tendency is universal, but Núñez and colleagues claim this is not the case.

123

 Mark for Review

Which finding, if true, would most directly support Núñez and colleagues’ claim?

- (A) Some Yupno grammatical structures used when talking about time are also used in Spanish.
- (B) Yupno speakers typically use their left hand to make temporal gestures regardless of whether the gestures are past oriented or future oriented.
- (C) Yupno speakers were observed making temporal gestures both indoors and outdoors, though with greater frequency when indoors.
- (D) Future-oriented gestures used by Yupno speakers do not, on average, point in the opposite linear direction of past-oriented gestures.

A student is writing a research paper on the history of irrigation in the state of California, situating the development of the Crystal Springs Reservoir (created in San Mateo County, California, in 1888) in a larger historical context. The student claims that innovation in irrigation techniques was driven in part by the climate in some parts of the state.

124

 Mark for Review

Which quotation from a study of California agriculture best supports the student's claim?

- (A) “The necessity of irrigation infrastructure in California today cannot be overstated, since it is the most common means of conveying water for agricultural use.”
- (B) “The irrigation system developed by the Hohokam people in the 7th century CE in what is now Arizona was simple but applied hydraulic engineering design features that are still used today in both Arizona and California.”
- (C) “While the low humidity of Southern California’s desert areas makes irrigation a requirement if agriculture is to be a success there, the relatively high humidity in the northern parts of the state makes such practices less necessary.”
- (D) “Competition for scarce water resources in Southern California inspired the development of sprinkler irrigation systems, a manner of irrigating that requires less use of water than traditional surface irrigation methods.”

The Nimatron was an early digital computer designed to play a mathematical game against visitors to the 1939–1940 New York World’s Fair. Though capable of making game moves in milliseconds, this one-ton machine—built by Westinghouse Electric Corporation engineers to demonstrate how electrical relays could respond to players’ choices according to predetermined mathematical patterns—_____ programmed with time delays to give the impression of deliberative thinking.

(D) That said,

- Ynés Mexía was a Mexican American botanist.
- Between 1917 and 1938, she collected over 150,000 botanical samples throughout the Americas.
- She collected a sample of *Mutisia speciosa* in Minas Gerais, Brazil, in 1930.
- She collected a sample of *Baccharis salicifolia* in Nayarit, Mexico, in 1926.
- *Mutisia speciosa* and *Baccharis salicifolia* are part of the Asteraceae family.
- These specimens can now be viewed online at the C.V. Starr Virtual Herbarium.

134

 Mark for Review

Which choice most effectively uses information from the given sentences to introduce Mexía to a new audience?

- (A) Between 1917 and 1938, Ynés Mexía collected samples of the plants *Mutisia speciosa* and *Baccharis salicifolia*, among others.
- (B) Botanist Ynés Mexía is known for collecting over 150,000 botanical samples throughout the Americas between 1917 and 1938.
- (C) Many of the botanical samples collected by Ynés Mexía, such as *Mutisia speciosa* and *Baccharis salicifolia*, can now be viewed on the C.V. Starr Virtual Herbarium.
- (D) Among the many botanical samples Ynés Mexía collected in Brazil in 1930 was *Mutisia speciosa* of the Asteraceae family.

While researching a topic, a student has taken the following notes:

- Sarah Hinckley et al.'s 2009 study of planktonic ecosystems used a nutrient-phytoplankton-zooplankton (NPZ) model.
- Diane Stoecker et al. (2017): NPZ models rely “on the differentiation of the planktonic communities into phytoplankton or zooplankton functional types,” excluding mixotrophic plankton.
- Phytoplankton are exclusively phototrophic, producing nutrients via photosynthesis.
- Zooplankton are exclusively phagotrophic, obtaining nutrients by consuming other organisms.
- Mixotrophic plankton are capable of both phototrophy and phagotrophy.
- Stoecker et al.: “Mixotrophy changes the basic trophic structure of...ecosystems; most of the unicellular organisms at the base of the plankton food web can no longer be regarded as strictly producers or consumers.”

135

 Mark for Review

The student wants to challenge the model used in Hinckley et al.'s study. Which choice most effectively uses information from the notes to accomplish this goal?

- (A) Since it classifies plankton as exclusively phototrophic producers or phagotrophic consumers, the model used in Hinckley et al.'s study may misrepresent planktonic ecosystems, in which—as Stoecker et al. note—many plankton combine these functions.
- (B) Hinckley et al.'s 2009 study used an NPZ model, which, as Stoecker et al. point out, unnecessarily categorizes organisms as either phytoplankton, zooplankton, or mixotrophic plankton.
- (C) By restricting plankton functional types to phytoplankton and zooplankton, the model used in Hinckley et al.'s study of planktonic ecosystems overlooks the many mixotrophic species that—as Stoecker et al. note—function as neither producers nor consumers.
- (D) Hinckley et al.'s model disregards the respective roles of producers and consumers—organisms that, as Stoecker et al. emphasize, are essential to the trophic structure of the plankton food web.

In areas with mineral-rich water, mineral deposits may build up inside water heaters. If not treated or removed, these deposits can grow large enough to _____ heat transfer, thereby undermining the main function of the devices.

☐ (A) convert

☐ (B) require

☐ (C) isolate

☒ (D) impede

The early twentieth-century modernist movement is often characterized in terms of revolutionary artists' struggle against a static middle-class culture; by contending that the latter was itself _____, literary scholar Michael Levenson frames the conflict between the two not as a clash between dynamism and stagnation but instead as "a contest of novelties."

137

 Mark for Review

Which choice completes the text with the most logical and precise word or phrase?

☐ (A) attenuated

☐ (B) yielding

☒ (C) evolving

☐ (D) entrenched

Answer: C

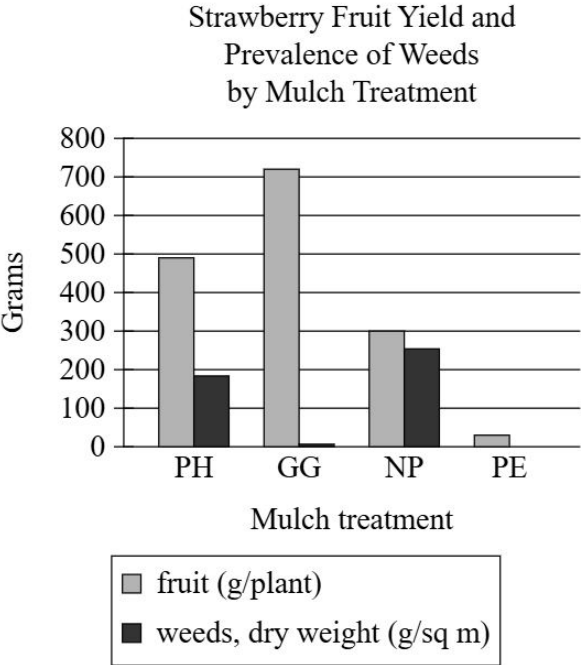

Even famed film editor Thelma Schoonmaker, winner of multiple Academy Awards and recipient of the BAFTA Fellowship in 2019, is constrained by the footage available to her and will, at times, knowingly include shots with what are often deemed continuity “errors,” as was the case in *The King of Comedy* (1982), which includes a scene depicting Rupert Pupkin waiting by a bank of pay phones. Close observation reveals that only one pay phone has its handset properly stowed, except in one shot where two are stowed. A student writing a paper for a film-studies class contends that Schoonmaker’s priority was to focus scenes around the actors’ performances and that she therefore included the shots with the most compelling performances whenever possible.

138

 Mark for Review

Which quotation from a viewer of *The King of Comedy* most strongly suggests that Schoonmaker achieved her goal despite the presence of continuity errors in the film?

- (A) “I was paying attention to Rupert when the state of a pay phone changed in the scene, which I found distracting.”
- (B) “I noticed the state of a pay phone in the scene, but I tend to look closely at such details in films.”
- (C) “I noticed the state of a pay phone changing in the scene, but such inconsistencies are fairly common in films and easy to ignore.”
- (D) “I was watching what Rupert was doing far too closely to notice the state of a pay phone.”

Polyethylene (PE) plastic sheeting is used as agricultural mulch because it is effective at reducing the propagation of weeds. Seeking a biodegradable alternative, Waqas Ahmad and colleagues tended otherwise equivalent plots of strawberries mulched with PE sheeting or one of several newsprint pulp-based alternatives: just newsprint pulp (NP), pulp bound with guar gum (GG), or pulp bound with psyllium husk (PH). The graph represents strawberry plots for which all emerging weeds were left in place throughout the experiment. Once the fruit was harvested, the weeds were removed, dried, and weighed for dry biomass. Based on the results, there was not a predictable association between treatment effectiveness and fruit yield.

139

Mark for Review

Which choice most effectively uses data from the graph to support the underlined claim?

- A

The psyllium husk and guar gum treatments were associated with lower weed biomasses and higher fruit yields than the treatment with just newsprint pulp was.
- B

While the guar gum and polyethylene treatments were associated with the lowest weed biomasses, the guar gum treatment was associated with the highest fruit yield and the polyethylene treatment was associated with the lowest fruit yield.
- C

The treatment with just newsprint pulp was associated with the highest weed biomass and was not one of the two treatments associated with the highest fruit yields.
- D

While the psyllium husk treatment was associated with a higher weed biomass than the guar gum treatment was, the guar gum treatment was associated with a higher fruit yield than the psyllium husk treatment was.

At Cayo Largo (Puerto Rico), coral colonies experiencing degradation—a problem facing reefs globally—have been enhanced with transplanted fragments of elkhorn (a stony coral). This is a useful restoration approach but is challenging at scale since it involves cultivating and individually moving young stony coral pieces. In 2025, Samapti Kundu and her team announced a new approach: coating reef substrates with a simple-to-apply substance, made with inexpensive and abundant core components (e.g., gelatin), that can mimic a signal that draws coral larvae to settle in healthy reefs. When tested in conditions simulating real ocean environments, the substance enhanced settlement by up to twentyfold. These attributes suggest that the substance _____

140

 Mark for Review

Which choice most logically completes the text?

- (A) offers a means of reef restoration that likely allows much broader implementation than the approach used at Cayo Largo does.
- (B) should be able to simulate healthy reef signals even more closely when it is applied in natural ocean conditions.
- (C) is likely to require more costly components to ensure its stability when used for coral colonies as degraded as those at Cayo Largo.
- (D) should be most beneficial for restoring reefs that predominantly consist of elkhorn coral colonies.

Answer: A

While pointe shoes, worn by ballerinas so they can balance on their toes, originated as simple satin slippers, some now incorporate modern materials or shock-absorption techniques inspired by athletic footwear. Such innovations, developed to address the increase in physically demanding choreography in modern ballet, _____ the evolution of the pointe shoe that began centuries ago.

☐ (D) Instead,

Answer: A

In a 2022 analysis of small sovereign countries, Archie Simpson categorized forty-one as microstates based, in part, on the criterion of having a population under one million—for instance, San Marino, with its population of approximately 34,000. _____ political scholar Sarina Theys suggests an intersubjective approach to classification by which a small country's status is self-defined rather than relying on externally imposed or quantitative standards.

144

 Mark for Review

Which choice completes the text with the most logical transition?

- ☐ (A) Challenging the accuracy of San Marino's population data,
- ☐ (B) In addition to this example,
- ☐ (C) Reinforcing the importance of Simpson's population criterion,
- ☒ (D) Countering this method of categorization,

- Antonio Stradivari (1644–1737) was an Italian instrument maker.
- He made about 1,000 violins in his lifetime.
- Musicians prize his Stradivarius violins for their famed sound quality.
- The Ole Bull Stradivarius is named for former owner Ole Bull, a Norwegian violinist.

145

Mark for Review

Which choice most effectively uses information from the given sentences to introduce Ole Bull to a new audience?

- (A) Of the 1,000 or so violins Antonio Stradivari made, only about 500 exist today.
- (B) Ole Bull was a Norwegian violinist who once owned a Stradivarius violin.
- (C) Born in 1644, Antonio Stradivari was an Italian instrument maker whose violins are famous for their quality.
- (D) The Ole Bull Stradivarius is named after Ole Bull.

Answer: B

- The Highpointers Club is a hiking club.
- One of the main goals among club members is to reach the highest points in all fifty US states.
- Those who achieve this are called 50 Completers.
- In Suk Han became a 50 Completer on November 15, 2013.
- The highest point in Wisconsin is Timms Hill, at 1,951 ft.
- The highest point in Wyoming is Gannett Peak, at 13,809 ft.

146

 Mark for Review

Which choice most effectively uses information from the given sentences to explain the 50 Completers hiking challenge to a new audience?

- (A) If you are looking for a new hiking challenge, consider joining the Highpointers Club, as did In Suk Han, a hiker who successfully reached the highest point in every US state.
- (B) Not until after you have reached the highest points in all fifty US states—including Timms Hill in Wisconsin and Gannett Peak in Wyoming—can you include yourself among the 50 Completers of the Highpointers Club.
- (C) On November 15, 2013, In Suk Han finally completed the feat of reaching the highest point in all fifty US states, including Timms Hill in Wisconsin and Gannett Peak in Wyoming.
- (D) Hikers aiming to count themselves among the 50 Completers must reach not only Wisconsin's Timms Hill but also the even higher peak of Gannett Peak in Wyoming.

A student has taken the following notes:

- A team of researchers led by Guanning Pang discovered that inactive volcanoes in the Cascade Range have large underground magma chambers 3 to 9 miles below their surface.
- Some of these volcanoes have been dormant for thousands of years.
- Researchers detected magma by tracking earthquake waves that slowed down when passing through chambers of magma consisting of 3% to 32% melted rock.
- Magma chambers need over 35% liquid rock to potentially erupt.
- These findings challenge the scientific theory that magma chambers only exist right before eruptions.
- The discovery could improve volcano monitoring and eruption prediction methods.

147

 Mark for Review

A student wants to undermine a scientific assumption about magma chambers. Which choice most effectively uses relevant information from the notes to accomplish this goal?

- (A) By tracking earthquake waves, Pang found that magma reservoirs sit 3 to 9 miles below the Cascade Range volcanoes' surface and need over 35% liquid magma to potentially erupt.
- (B) Scientists found inactive Cascade Range volcanoes with large magma chambers below their surface, challenging the theory that magma chambers only exist right before eruptions.
- (C) Magma chambers need over 35% liquid rock to potentially erupt, refuting the assumption that volcanoes dormant for thousands of years have melted rock below.
- (D) Researchers detected magma chambers by tracking earthquake waves through partially melted rock, improving volcano monitoring and eruption prediction methods for dormant volcanoes.

A trend away from stable, relatively high humidity in the Middle East over the past 8 million years can be inferred from the composition of cave formations dating to different periods. Cave formations from about 7 million years ago mainly consist of transparent columnar calcite, indicative of an underground water system regularly replenished by rainfall. Cave formations younger than approximately 1 million years, however, mainly consist of branching, opaque (and sometimes colorful) material, often with more frequent growth interruptions, indicating an intermittent water supply.

148

 Mark for Review

Which choice best describes the function of the two underlined portions in the text as a whole?

- (A) They identify different characteristics of cave formations that when considered together provide evidence for a long-term shift toward lower and more variable humidity in the Middle East.
- (B) They describe divergent features of cave formations that when taken together imply decreasing variation in Middle Eastern rainfall over time.
- (C) They draw a contrast between Middle Eastern cave formations that is suggestive of geographic differences in the underground water supply.
- (D) They provide evidence from different Middle Eastern cave formations that substantiates the claim that the region experienced a long period of relatively high humidity.

Vertical gene transfer involves the transmission of genetic material from a parent to offspring; horizontal gene transfer, on the other hand, involves the exchange of genetic material between organisms not in a parent-offspring relationship. While horizontal gene transfer is common among prokaryotes—single-celled organisms, such as the bacteria *Enterococcus cecorum* and *Moraxella caviae*—it has rarely been observed among eukaryotes (multicellular organisms). However, new studies suggest that horizontal gene transfer is more common in eukaryotes than originally thought.

149

 Mark for Review

Which choice best states the function of the underlined sentence in the text as a whole?

- ☐ (A) It explains why a common perception of a biological process is flawed.
- ☐ (B) It argues that two biological phenomena are more similar than they may initially appear to be.
- ☐ (C) It indicates a distinction between the mechanics of two kinds of biological processes.
- ☒ (D) It contrasts the frequency with which a biological phenomenon has been detected in two categories of organisms.

Maltese lithic (stone implement) assemblages from the sixth and seventh millennia BCE exhibit notable characteristics. Nearly all implements were fashioned from limestone—mostly from beach cobbles—rather than superior chert or obsidian, and the assemblages predominantly comprise flakes produced through direct percussion, with negligible representation of cores, blades, or retouched tools. The fairly rudimentary nature of Malta's lithic industry parallels contemporaneous Sardinian technologies rather than the sophisticated geometric microlith traditions documented in neighboring Sicily.

150

 Mark for Review

Which choice best states the main idea of the text?

- (A) Although Malta, Sardinia, and Sicily all show evidence of lithic industry in the sixth and seventh millennia BCE, the characteristics of the stone tools in each location suggest three distinct levels of technological sophistication.
- (B) Maltese stone tools from the sixth and seventh millennia BCE are notable for their relative simplicity and their similarity with stone tools produced in Sicily.
- (C) While not definitive evidence, the materials and methods used in the production of Maltese stone tools in the sixth and seventh millennia BCE are strongly suggestive of the exchange of lithic technology between Malta, Sardinia, and Sicily.
- (D) The characteristics of Maltese stone tools from the sixth and seventh millennia BCE are indicative of a level of lithic technological development that, while not uniquely low, was less advanced than that observed nearby in Sicily.

Biologist Grace Herzel and colleagues conducted a study of how butterfly color and weather conditions relate to butterfly behavior, which wouldn't have been possible without data gathered by students and other amateur science enthusiasts in the community. Considering over three years' worth of data, the researchers found that white butterflies were observed on green flowers more often than any other butterflies were, and that butterflies were observed to feed more often on cloudy days than on other days.

151

 Mark for Review

According to the text, which factors seemed to be linked to the behavior of butterflies in Grace Herzel and colleagues' study?

- ☐ (A) Neither butterfly color nor weather conditions
- ☐ (B) Weather conditions but not butterfly color
- ☐ (C) Butterfly color but not weather conditions
- ☒ (D) Both butterfly color and weather conditions

Answer: D

California is one of several US states with legislative provisions for the incorporation of worker cooperatives, businesses in which each worker receives an equal vote in company governance. Skeptics have questioned the co-op model for decades and declared _____ means of governance economically unsustainable, ignoring many examples of successful worker-owned businesses.

152

 Mark for Review

Which choice completes the text so that it conforms to the conventions of Standard English?

☒ A its☐ B they're☐ C their☐ D one's

In the Pakistani truck art tradition, elaborately decorated cargo vehicles feature poetic verses, religious messages, or slogans that reflect drivers' values, aspirations, or humor. ____ they invest considerably in decorating their trucks, seeing them both as personal artistic creations and as contributions to their country's folk art tradition.

153

 Mark for Review

Which choice completes the text with the most logical transition?

- (A) Indeed, owners prize their vehicles as canvases for creative expression:
- (B) Finally, owners complete the artistic process after months of planning:
- (C) However, owners must balance these aesthetic elements with practical functionality:
- (D) As a result, owners expect significant financial returns from their decorated vehicles:

The Underdogs is a 1915 novel by Mariano Azuela, originally written in Spanish. In the novel, Azuela makes a comparison using natural imagery to convey the mental state of the protagonist, Demetrio: _____

154

 Mark for Review

Which quotation from a translation of *The Underdogs* most effectively illustrates the claim?

- (A) “Yet he was previous; an hour or more elapsed with no sound or stir save the song of the locust in the brush or the frog stirring in his mudhole.”
- (B) “At this hour, as usual, the calcinated rocks, the sun-burnt branches, and the dry weeds faded into the semi-obscurity of the shadows.”
- (C) “Demetrio suppressed a sigh. Memories crowded and buzzed through his brain like bees about a hive.”
- (D) “Demetrio laid a hand on his hair which covered his ears, and stretching himself out for a long time, seemed to be lost in thought.”

Whereas Rebecca M. Harrison and Pia Nystrom's 2001 study of captive bonobos reported more right-handedness than left-handedness, Jane Goodall's 1963 study of wild chimpanzees did not. According to a meta-analysis of studies of nonhuman primates, captive populations are more likely to be described as right-handed than wild populations are. Statistical analysis indicates a handedness study would need a minimum of 176 individuals to show a representative result; however, the study by Harrison and Nystrom included a total population of 19, and the study by Goodall included a total population of 8. This suggests that _____

155

 Mark for Review

Which choice most logically completes the text?

- (A) Goodall likely underestimated the prevalence of right-handedness among the wild chimpanzees in the study.
- (B) the study by Harrison and Nystrom reliably represents handedness in captive primates but not in wild primates.
- (C) the study by Harrison and Nystrom reliably represents handedness in captive primates, but the study by Goodall likely does not reliably represent handedness in wild primates.
- (D) neither the study by Harrison and Nystrom nor the study by Goodall provides sufficient evidence to make a meaningful comparison about handedness in primates.

$$x + 12 = y(z + 9)$$

The given equation relates the distinct positive variables x , y , and z . Which equation correctly represents z in terms of x and y ?

(A) $z = \frac{x+3}{y}$

(B) $z = \frac{x}{y} + 3$

(C) $z = \frac{x+12}{y} + 9$

(D) $z = \frac{x+12}{y} - 9$

$$g(x) = \frac{1}{4}(9)^x$$

If the given function g is graphed in the xy -plane, where $y = g(x)$, what is the y -intercept of the graph?

☐ (A) $(0, 0)$

☒ (B) $(0, \frac{1}{4})$

☐ (C) $(0, \frac{9}{4})$

☐ (D) $(0, 9)$

Triangle ABC is similar to triangle XYZ such that A , B , and C correspond to X , Y , and Z , respectively. The length of each side of triangle ABC is n times the length of its corresponding side in triangle XYZ , where n is an integer greater than 1. The measure of angle C is 59 degrees, and $YZ = 72$. Which of the following must be true?

(A) The measure of angle Z is $\frac{59}{n}$ degrees.

(B) The measure of angle Z is $59n$ degrees.

(C) $BC = \frac{72}{n}$

(D) $BC = 72n$

$$5|x - 5| = 30$$

What is the sum of the solutions to the given equation?

(A) -6

(B) 0

(C) 10

(D) 35

Answer: C

In the xy -plane, circle M is the graph of the equation $(x - 7)^2 + (y - 5)^2 = 9$. Circle P has the same center as circle M but has a radius that is twice the radius of circle M . Which equation represents circle P ?

☐ (A) $(x - 7)^2 + (y - 5)^2 = 18$

☒ (B) $(x - 7)^2 + (y - 5)^2 = 36$

☐ (C) $(x - 14)^2 + (y - 10)^2 = 9$

☐ (D) $(x - 14)^2 + (y - 10)^2 = 18$

A chef made 36 cups of sauce. The chef then filled x small jars and y large jars with all the sauce he made. The equation $2x + 5y = 36$ represents this situation. Which is the best interpretation of $5y$ in this context?

- ☐ (A) The number of large jars the chef filled
- ☐ (B) The number of small jars the chef filled
- ☒ (C) The total number of cups of sauce in the large jars
- ☐ (D) The total number of cups of sauce in the small jars

Note: Figure not drawn to scale.

In triangles RST and XYZ shown, $\overline{XY}$ is parallel to $\overline{TS}$ and $\tan R = \frac{396}{403}$. What is the value of $\sin X$ in triangle XYZ ?

(A) $\frac{396}{799}$

(B) $\frac{396}{565}$

(C) $\frac{403}{565}$

(D) $\frac{403}{396}$
